## Abstract of JP 11289353 (A)

PROBLEM TO BE SOLVED: To provide an accounting system for a data network of combination type. SOLUTION: An interworking function 66 in service includes a foreign network 62, which includes a foreign accounting collection module and a home motion exchange center accompanying a home interworking function 72. The home interworking function 72 includes a home accounting collection module, subscribes a front line data network, and includes an end system which can be connected to a foreign access hub. The home and service accounting collection module collects accounting data on a message traffic, which is transferred through the system function 66 in service between an end system and the communication server.
